RDP HOUSING REPAIR SYSTEM

- Durox Texgrid N10
Structural Water Proofing Membrane
One Coat Base Coat Paint

GE  TECH

Nano Chemicals

Remove all loose concrete from large cracks. Fill cracks and holes with Structural water proofing Membrane. Float all areas filled in line with the surface.

Structural water proofing Membrane

Wrap the Durox Texgid N10 netting around the walls starting at one point, this must be stretched tightly and pinned every 500mm to ensure that it sticks to the wall

Durox Texgrid N10

Mix the Structural water proofing membrane, as per instructions on the kit and fill the hopper gun with the mixture. Start from one side and spray the mixture onto the wall in small sections.

Structural water proofing Membrane

As soon as the mixture has been sprayed onto the wall, start to float the sections to ensure a smooth surface.

Structural water proofing Membrane

After the house has been sprayed do the finishing touches by cutting and removing the excessive netting.

Structural water proofing Membrane

Once the whole process has been completed and every surface has been covered allow to dry for 12 hours.

Structural water proofing Membrane

When the drying process is done after 12 hours, paint with Geo-Paint Once Coat Base Coat paint in the colour of your choice - Red, Terra Cotta, White, Yellow, Tan, Green or Grey.

One Coat Base Coat Paint
